

July 1 - July 7, 2024:

Building a Full React Project

- Topics Covered:

- Working with React Context for global state management.
- Advanced React patterns like "lifting state up" and prop drilling.
- Integrating third-party libraries like Axios for API requests.

- Project Work:

Started building a full project with React—a task management app where users can create, update, and delete tasks. The app uses Context API for managing user authentication and global state.
