

****June 16, 2024 (Day 7): Functions and Events in JavaScript****

- **Topics Covered:**

- Defining and calling functions.
- Understanding event-driven programming (click, change, submit).
- Using `addEventListener` for handling events.
- Basic DOM manipulation (changing text, hiding/showing elements).

- Project Work:

Added a button to the portfolio site that triggers a JavaScript function to show an alert when clicked.
Also, added an interactive element to change text when a user clicks a button.
